
The blue line is the MOST SUCCESSFUL cell of every attack we ran at each τ — A1, A3 and A4 across three decoy difficulties and three block sizes — which is the choice least flattering to us.
⚠ It includes A4's multiplicity-inflated block maxima: picking the best of 650 blocks is optimistically biased, and after Bonferroni correction the largest excess is z = +2.65 against a critical value of 4.51.
ARM 2, chr21 at full budget, 250 trials per cell per hypothesis. Provenance: logs/B_arm2_attack.md, logs/B_arm2_a3a4.md
